| Full Back (Shoulders Excl.) | R1750 |
| Full Back (Shoulders Incl.) | R2200 |

From the 1st of July 2017 our prices will include VAT

How do I prepare for my first treatment?

In preparation for your first treatment and every subsequent treatment:

1. Do not bleach, tweeze or wax the hair for 4 weeks before your first treatment and also between treatments. (The root of the hair should stay intact.)
2. In between treatments you can use depilatory creams or shave.
3. The hair needs to be shaved smooth a day before or on the day of the treatment. Hair on the surface will interfere with the laser hair removal process and affect the effectiveness of the treatment.
4. Do not tan, sunbed or use self-tan products at least a week before you come. If you have been in the sun, please mention it to us so we can adjust the settings.
5. If you have very sensitive skin or get shaving rash, do not shave on the day of the procedure. Then rather shave the day before.

What can I expect after a treatment?

Post treatment reactions vary. Most people experience no side effects at all, though few exhibit superficial scabs, itching or some short-term local reddening.

This may last from a few minutes to 2 days depending on the area treated and your skin's sensitivity. It is advisable to keep the skin protected from exposure to direct sunlight and not to expose the treated area to the sun for long periods of time during the course of your treatment. If you need to go into the sun please wear a SPF 50 Sunblock on the area.

If, in the rare occasion, you develop scabs or blisters after treatment, please contact us so we can give you the appropriate aftercare cream.

Are there any restrictions on my activity after treatment?

You can return to work or normal activities immediately following your laser hair removal procedure.

However:

- Do not shower or bath in hot water for the first day.
- Do not go into a steam room or Sauna
- No Exercise for at least 24 Hours
- Keep the treated area cool after the treatment (for at least one day). If you had laser hair removal on the legs for ex, wear loose dresses or skirts. No skinny jeans or boots (that will heat up the area and may cause irritation)

What can I expect by the end of my treatment package

- You can expect a 75 to 95% permanent reduction in hair.
- If, after your series of 6 treatments, you could benefit from more treatments, you can pay per treatments and get a 30% discount per treatment.

Hormonal imbalance may affect the long term effectiveness of hair reduction especially on the chin area.

We cannot guarantee the long term results of clients who have PCOS. They may need regular maintenance treatments.
